| | | <ul style="list-style-type: none">• UNL, R7 LCRD and ECAD, and OPP participated in a call on 6/8/20 where UNL researchers shared information that they believe may indicate that their managed bees at the Ft. Mead Research facility may be being impacted by either foraging on wet cake or by taking up contaminated discharge from an ethanol plant | |

located 1.5 miles from the research facility. The data presented was limited and they are hoping to do additional research. OPP asked numerous questions regarding the data and in follow-up discussions

Ex. 5 Deliberative Process (DP)

has indicated they intend to continue to do research in the issue. They had requested forming a work group that appeared to be aimed at further evaluating these issues more broadly and perhaps formulate policy recommendations. R7 did indicate interest in updates on the progress of their research.
